L3 ANSWER 6 OF 6 USPATFULL
SUMM The licorice extract, succus liquiritiae, was formerly widely recommended for ulcer-therapy. However, it became evident that the healing of ulcers was associated with water retention which led to the formation of oedema of the face and limbs, in

particular the knuckles. This was sometimes accompanied by dizziness and headache. These phenomena rapidly disappeared upon the discontinuance of the administration of the medicament.

SUMM The material of the invention is prepared from a mixture obtained from **licorice extract**, preferably from commercial extracts of succus liquiritiae or from commercial dyestuff-containing ammoniacal glycyrrhizine. To this end, an aqueous dispersion is prepared from the starting material and is combined with ethyl urethane, thereby dissolving the undesired red dyestuff, a moderately acidic pH value is produced by adding water or diluted acid whereby glycyrrhizinic acid contaminated with yellow dyestuff precipitates, the supernatant solution containing the red dyestuff is discarded, the precipitate is dissolved in dilute alcoholic acid and is subjected to alcoholysis with simultaneous alkylation, the precipitated glycyrrhetic acid is discarded, the supernatant solution is boiled down and the so-obtained product is dried.

DETD After centrifugation, the precipitate is washed nearly **acid-free** with water and dried, yielding 126 g of precipitate.

DETD The precipitate is placed in a 10 l beaker with 2000 ml of water and additional 3 l of water are added. After the precipitate has settled, it is sucked off, washed as **acid-free** as possible and dried.

DETD It is known, for example, that when administering succus liquiritiae and glycyrrhizinic acid water retention occurs and as a consequence thereof oedema are formed in the face and at the limbs, particularly the knuckles. In addition, the potassium level in the blood falls off upon administration of these substances which has a disadvantageous effect on the myocard and this effect is accompanied by an increase in venous pressure and a substantial increase in blood pressure. Thus, individuals who take **licorice extracts** are liable to suffer inter alia from heart asthma.
